

# EARTH-FRIENDLY LIVING

This is a scavenger hunt for earth-friendly products suitable for a bedroom: furniture, clothes, and so on. Your goal is to furnish this room in the most earth-friendly and inexpensive way you can, while still furnishing a room you would like to have yourself. Items may be considered earth friendly for some of the following reasons:

- They use less electricity or resources when produced or when used.
- They are made of renewable resources or recycled material.
- They are made in a way that has a low environmental impact, or less of an impact than the way the item is commonly made.
- They have been used before—are secondhand (less expensive!).
- They are shared with others (probably family members in this case).

Find each of the following items for your bedroom. For each item, list the place it can be purchased (name the store, list the Web site and so on) and the price. On a separate piece of paper, explain why each item is earth friendly. Include four other items you might find in a room, such as a rug, a poster, books, music, and so on.
